Open Models

José Palazzo M. de Oliveira

Open Models

- Open models is the idea that certain models should be freely available to everyone to use and republish as they wish, without restrictions from copyright, patents or other mechanisms of control
- The goals of the open models movement are similar to those of other open movements such as *open source*, *open hardware*, *open content*, *open data*, *open science*, and *open access*

- *If you have something that you don't want anyone to know maybe you shouldn't be doing it in the first place*

The balance

The balance

Two different situations

States

- Must be impersonal, isonomic and make transparent decisions

Companies

- Interest in privacy
- Business secrecy
- Market secrets

𝔵

- Transparency and Exchange of Information for Tax Purposes – OCDE
- Operational information for stakeholders

CONFIDENTIAL
NOT TO BE DISCLOSED

The answer

Why? In contrast to the tremendous propagation of open source in software development, an analog paradigm does not seem to gain comparable momentum in modeling

- Answer
  - A repository of models will increase the productivity
  - A low level of patters will make difficult the work
  - A higher level of patters may endanger the enterprise *privacy*
  - Are the enterprises willing to cooperate?
  - The governments must make their models widely available, want them?

Imagine

"Imagine no possessions
I wonder if you can
No need for greed or hunger
A brotherhood of man
Imagine all the people
Sharing all the world"

John Lennon
